Philosophy

Global View

With our international strategy, we have become the main supplier of precision locknuts for the machine tools, machinery, and machining industries. In line with our global position we hire employees from many countries, based on their skills rather than their nationality.

Although precision spindle locknuts are a very small component, they deliver great value. We have many competitors in other countries we do not limit our markets to South East Asia. The value of our products means that we can compete easily in global markets from Taiwan and remain the number one supplier of our product.

Located In Taiwan

Yinsh produces all types of precision locknuts and we have already achieved an 80% market share in Taiwan, with over 3000 domestic customers. We maintain all of our research and production in Taiwan and have not moved any of our production capacity to other countries.

Taiwan is established as our corporate Headquarters, so all of our skills and knowledge are maintained in Taiwan. This makes us very different from other companies that have spread both their production and skills to other countries. Our corporate philosophy is Sustainability, Growth, Excellence, Sincerity.

Corporate Value

We are constantly increasing the quality of our products and the service that we provide to our customers. We care about the safety of our workers and our development of new products is always in line with market trends and customers needs, so we can see future market requirements very early. We care about quality, safety and our environment.

We work hard to enhance our marketing to many markets including; Japan, Germany, Italy, Spain, Korea, China and South East Asia.

Sustainability ▪ Growth
Excellence ▪ Sincerity
